

Assessments

Map your curriculum to the specific competencies needed by a group or an individual.

No two workplaces are alike. No two workers are alike. Why should a training program assume they're all the same? Instead of a generic program for all workers, Tooling U-SME assessments allow you to align competencies, curriculum, and the needs of individual workers. Workers devote time to studying exactly what they need in a self-paced learning environment.

Aligned with the competencies you require.

Using the Tooling U-SME Competency Framework, you set the competencies required for your specific workplace. Assessments are created by incorporating questions from our extensive bank that covers each specific area of every class, fully mapped to our industry-proven curriculum.

Pre-filter each worker's course schedule to meet individual needs.

Based on the results of the assessment, each person's schedule is automatically pre-filtered to include classes that address needs and eliminate unnecessary ones, optimizing training time.

Post-Training Assessments provide concrete validation of results.

The Post-Training Assessments, similar to your Pre-Program Assessments, are directly mapped to the competencies required and the curriculum taught. Learning progress is measured objectively, allowing for clear reporting that can be linked to ROI.

Job Titles may include the following:

- Automation (Motion Control, Robotics) Technician
- Electrical Maintenance: Production
- Electrical Maintenance Technician
- Fluid Systems Technician
- Maintenance Fundamentals
- Mechanical Maintenance: Production
- Mechanical Maintenance Technician
- Welding Fundamentals
- Machining Fundamentals
- Lathe Operator
- Mill Operator
- Production Grinder
- Production Machinist
- Toolmaker/Diemaker
- CNC Programmer
- Grinding Technician
- Quality Technician

And much more...
